

CASE STUDY

THE BOULEVARD EARLY LEARNING CENTRE

Background

With changes in regulations, local councils are imposing strict acoustic guidelines on Child Care Centres across Australia. The Boulevard Early Learning Centre at Mt Warren Park, QLD, found itself in such a situation recently. Located amidst a residential housing area, the centre required an acoustic barrier to shield local residents from the play ground noise. In addition, the childcare centre consisted of two buildings with separate outdoor play facilities and verandahs for each – both of which were situated next to busy main roads. Hence, the solution also needed to ensure the children's safety from the surrounding busy roads. Another key requirement was fast installation so that the child care centre could become operational.

Solution

The SlimWall panel fencing system was deemed suitable for the needs of this project. Incorporating the AcoustiMax50 panels, SlimWall has proven noise reduction qualities of 16+dB. In addition, the simplicity of design allows for quick and easy construction. Two sections of SlimWall measuring 1.5m high by 52m length and 1.5m high by 68m in length were installed in just 3 days.

Industry leader in innovative and cost effective acoustic and boundary walls

- Proven acoustic performance
- Cost effective
- Durable, lightweight modular construction
- Quick and easy installation
- Suited to environmentally harsh and remote locations
