

CASE STUDY

UTILISE EVERY CENTIMETRE OF A SMALL BACKYARD WITH SLIMWALL™ FENCING

Background

When creating a home on a small lot, every cm² counts...so make every single one beautiful.

This gorgeous new home is part of Greenhills' land release estate, a community of designer houses on modest lot sizes. Through a few key decisions, the homeowners successfully utilised their entire backyard without wasting a slice of space.

Solution

Being situated in a coastal environment, our clients were after a solution that wouldn't corrode or rot; however, a rendered brick wall, with its wide strip footings, would shave off a sizeable chunk of their land around the perimeter.

Using SlimWall, they were able to achieve the same durability and premium rendered look, without losing any space to strip footings – and for half the price. The acoustic benefit was also attractive, as smaller lot sizes also meant a higher housing density throughout the development.

After installing the SlimWall, they were amazed at how much space they were left with. With SlimWall's integrating retaining functions, the area allowed for the construction of a stunning plunge pool and tiled decking area, and lighting installed within the wall beautifully enhanced their outdoor oasis.

The clients automatically extended the size and feel of their home by creative a cohesive design flow between their indoor and outdoor spaces. The SlimWall was finished to continue the premium interior design of the home, creating a connected aesthetic into the backyard, where the pergola created a shaded outdoor dining experience, which then organically flowed into the pool area.

The backyard then acted as an extension of the house, rather than a separate area, and created a stronger sense of open space, fresh air and natural light.

Industry leader in innovative and cost effective acoustic and boundary walls

- Proven acoustic performance
- Cost effective
- Durable, lightweight modular construction
- Quick and easy installation
- Suited to environmentally harsh and remote locations
